

Eon presents Vehicle Tracking and Fleet Operations Optimisation solution specifically tailored for the School buses, and which has already proven itself, and is successfully deployed on hundreds of buses of leading schools in the country.

Eon Infotech Limited is an ISO9001:2008 certified 14-year young organisation working in the field of asset tracking systems. Our customers include demanding clients in the Defence Sector like Army & Navy, a number of leading corporates, premier schools and very large fleet operators. Eon has more than a decade of experience in GPS-based asset tracking solutions, and have deployed the most advanced Intelligent Transport System for public transport in the country.

For the School buses our solution allows the school administration or the fleet operator to know in real time the location of each and every vehicle. The solution ensures compliance to various parameters like route to be followed, speed limits to be adhered to, stops to be made etc. and allows the school authorities to know the driver behaviour in a proactive manner. Various trip wise reports can be generated for each and every trip of the day.

Besides the optimization of fleet operation, the system also allows the users to know the ETA (Estimated Time of Arrival) of the school bus at a specific stop.

Solution allows live Vehicle Tracking and extensive exception reporting (Tripwise reports, speeding, route deviation, unauthorised stoppages, etc.)

From the safety standpoint, it allows the organization to know the driving habits of a specific driver. The organization can thus identify habitual offenders on a routine basis.

The school can also give access to the parents/users via a weblink on the school website to enable them to know the ETA of a specific bus at a specific stop in real time. Besides the website, the same access can also be provided through a mobile phone application or through sms. This prevents needless calls from parents to the school transport authorities or bus drivers.

Besides this the solution Optionally offers interfaces with A/C , door switches etc. to inform the school authorities when A/C etc. was on or off and when and where were the doors of the vehicle opened.

Basically with the Eon Voyager solution for the school buses, nothing is impossible - the possibilities are truly limited only by human imagination.

As probably the only player in the country with end-to-end ownership over the entire solution – right from design and manufacture of the electronics, to the firmware, to the application and user interface – Eon is **uniquely positioned to keep customizing the solution to meet your evolving needs.**

Various commercial models beginning from OEM fitment, outright purchase or rental mechanisms are available.

To know more about how the solution can benefit you or schedule a live demonstration, please get in touch with us @ +91 9872889118
